SUMMARY

Full-stack software developer and B.Tech Computer Science graduate who builds and ships web applications end-to-end - responsive React frontends backed by PHP (Laravel, CodeIgniter) REST APIs and MySQL. Currently a Software Developer delivering production MVC applications after converting from an internship. Comfortable owning a feature from database and API design through to a polished, component-based UI.

TECHNICAL SKILLS

Frontend: React.js, React Native, JavaScript (ES6+), HTML5, CSS3, Responsive Design, Component-Based UI

Backend: PHP, Laravel (MVC), CodeIgniter 4 (MVC), REST API Design, JSON

Databases: MySQL, SQL, Schema Design, Query Optimization

Tools & Practices: Git, GitHub, VS Code, Postman, Android Studio, MVC, CRUD, SPA

Currently Learning: TypeScript, Next.js, Tailwind CSS

EXPERIENCE

Software Developer

Aug 2025 - Present

Hiesys Technologies Pvt. Ltd, Dehradun (converted from Software Development Intern)

- Develop and maintain full-stack web applications end-to-end using Laravel and CodeIgniter (MVC) on the backend with React on the frontend.
- Build responsive, component-based interfaces in React (HTML5/CSS3, JavaScript) integrated with backend services through REST APIs.
- Design and optimize MySQL schemas and queries, and debug production issues to improve application reliability and response time.
- Collaborate across the stack to ship features - from database and API design through to UI implementation and testing.

PROJECTS

UHB Inventory System

React, Laravel REST APIs, MySQL

- Built a full-stack inventory management system: a React single-page frontend consuming a Laravel REST API backend.
- Implemented CRUD operations, authentication, and state-driven UI updates for real-time inventory and order tracking.
- Modeled and optimized the MySQL database for reliable stock, order, and billing data.

Horticulture Nursery Management System

CodeIgniter, PHP, MySQL

- Developed a role-based nursery management system handling inventory, orders, billing, and plant records.
- Engineered a modular MVC architecture with secure session handling and automated stock and invoicing workflows, cutting manual data entry.
- Tuned MySQL queries and application modules to improve system performance and response time.

CERTIFICATIONS

- Python for Data Science - Great Learning

EDUCATION

B.Tech, Computer Science Engineering

Aug 2022 - Jul 2026

Graphic Era Hill University, Dehradun - CGPA: 7.1 - Class Representative
